## $30^{\circ}$ trouser pieces, 2 and 3 mm

Diameter A for 2 mm : $\varnothing 100-ø 1000 \mathrm{~mm}$.
Diameter A for 3 mm : $\varnothing 150-ø 1000 \mathrm{~mm}$.
Trouser pieces are welded and made of 2.00 and 3.00 mm sheet metal (s).
Trouser pieces with $\mathrm{A}=\mathrm{B}=\mathrm{C} \leq 400 \mathrm{~mm}$ are supplied for assembly with pull rings [f.b].
Trouser pieces with $A=B=C \geq 450 \mathrm{~mm}$ are supplied for assembly with flanges [m.fl].
Produced as straight trouser pieces when $\mathrm{A}=\mathrm{B}=\mathrm{C}$.

State A, B and C dimensions when ordering.

## Calculating L1 and L2:

$\mathrm{L} 1=0,5 \times \mathrm{A}$
$\mathrm{L} 2=\cos 30^{\circ} \times \mathrm{A}+100$

[^0]
[^0]:    Example:
    $A=B=C=350$
    $\mathrm{L} 1=0,5 \times 350=175$
    $\mathrm{L} 1=175 \mathrm{~mm}$
    $L 2=(0,866 \times 350)+100=403,1$
    $\mathrm{L} 2=403 \mathrm{~mm}$
